

JUST SAY NEIGH! to the drug Premarin

The Yellow Pill That Kills! (it's not yellow on the outside, it's yellow on the INSIDE!)

Wyeth-Ayerst Laboratory uses urine from pregnant mares (PMU) to produce a drug called Premarin(e). Premarin is frequently prescribed for the symptoms of menopause or for women who have had a hysterectomy, even though:

- Mares are confined and tied in small stalls in order to collect the urine.
- Mares no longer able to produce "their quota" of urine and the majority of the resulting foals are routinely auctioned off or privately sold for slaughter.
- Synthetic alternatives to Premarin are readily available.

For these reasons **we, the undersigned**, demand an end to the production of Premarin (PMU). (Please mail this completed form to: Office of the President, Wyeth Inc., 5 Giralda Farms, Madison, NJ 07940).

Join HorseAid in "Op 0" (Operation Zero)

If you are one of the nearly 9 million women currently taking organic Premarin, won't you please ask your doctor to prescribe a synthetic non-organic substitute in its place and help us realize our goal of ZERO Premarin use (and production) by the year 2005! (<http://www.premarin.org>)

ZERO women taking Premarin equals ZERO Premarin produced!
